

Placement Empowerment Program

Cloud Computing and DevOps Centre

Set up a cloud -Based Monitoring

Name: Sharon J Christopher

Department: CSE

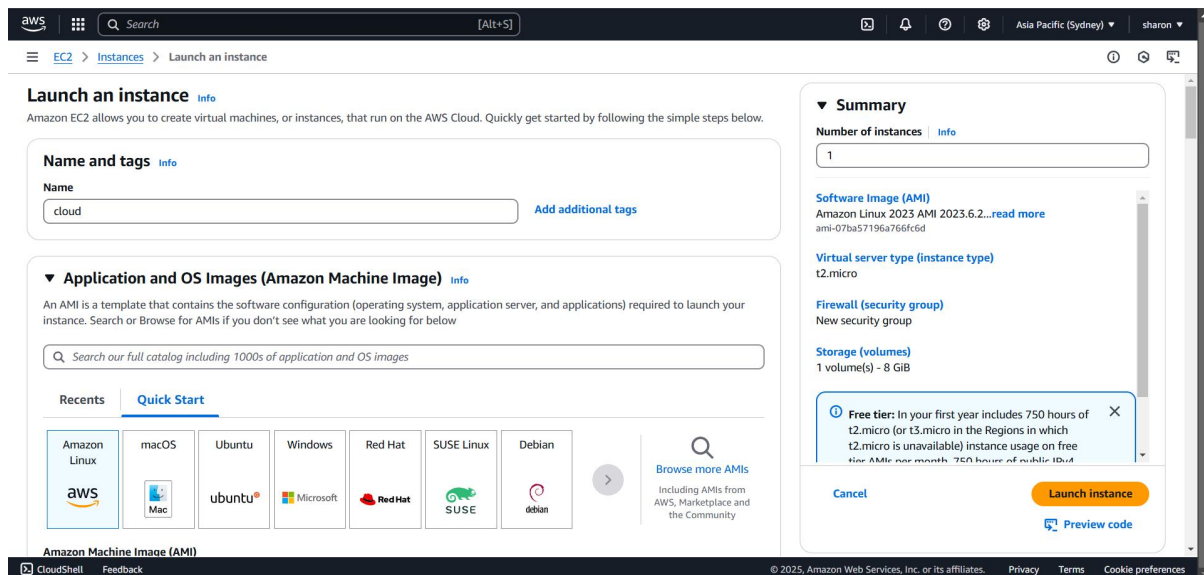

PoC: set up a cloud-Based Monitoring

Step 1:

Open Aws console

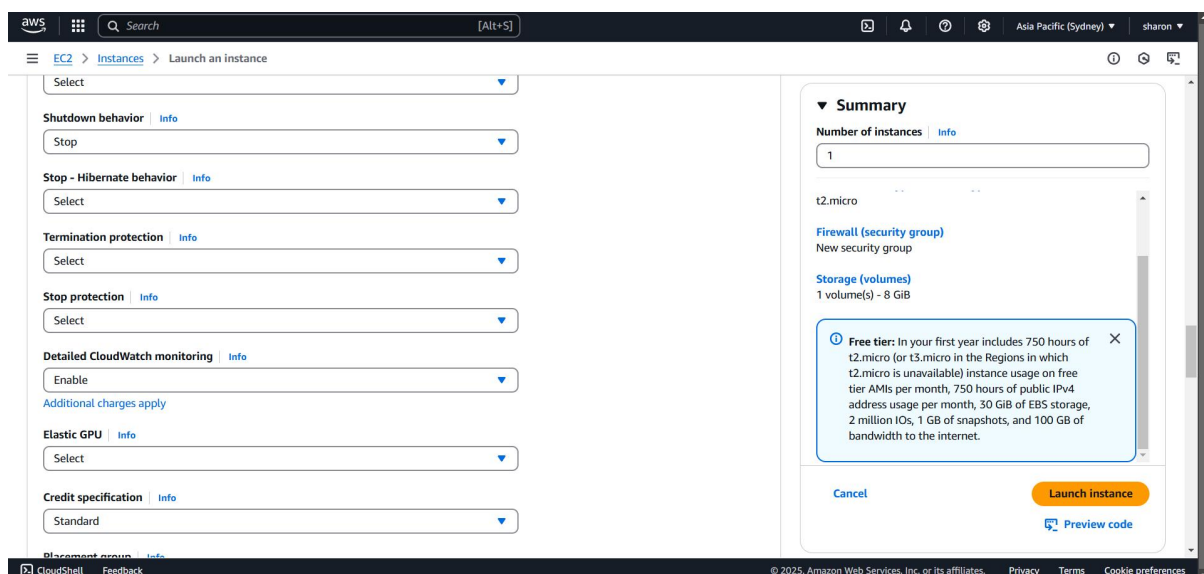

Step 2:

Search for ec2 instance, choose your ami, keys and security groups.

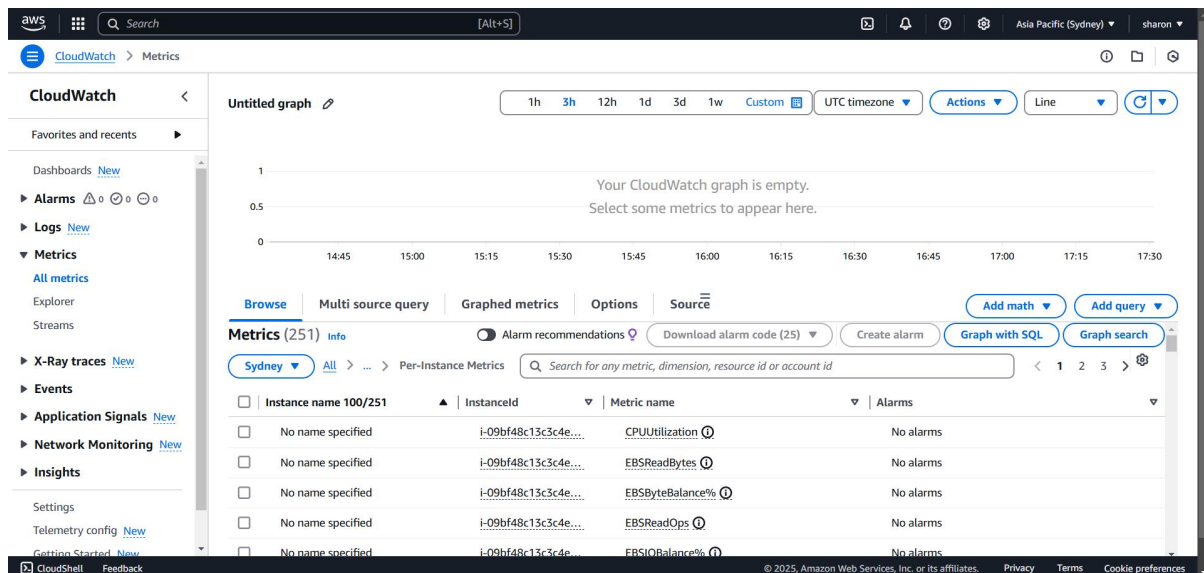

Step 3:

Open the advanced settings and enable the detailed cloudwatch monitoring and launch the instance.

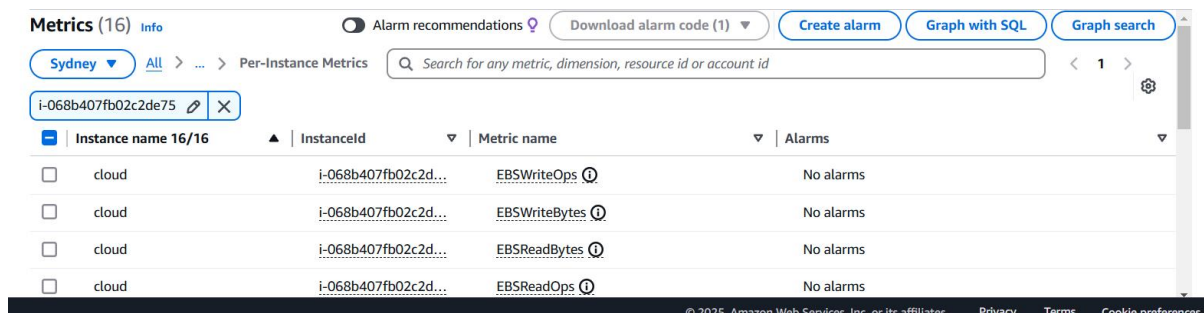

Step 4:

Open cloudwatch and click on all metrics on the metrics section there many vm's can be seen.

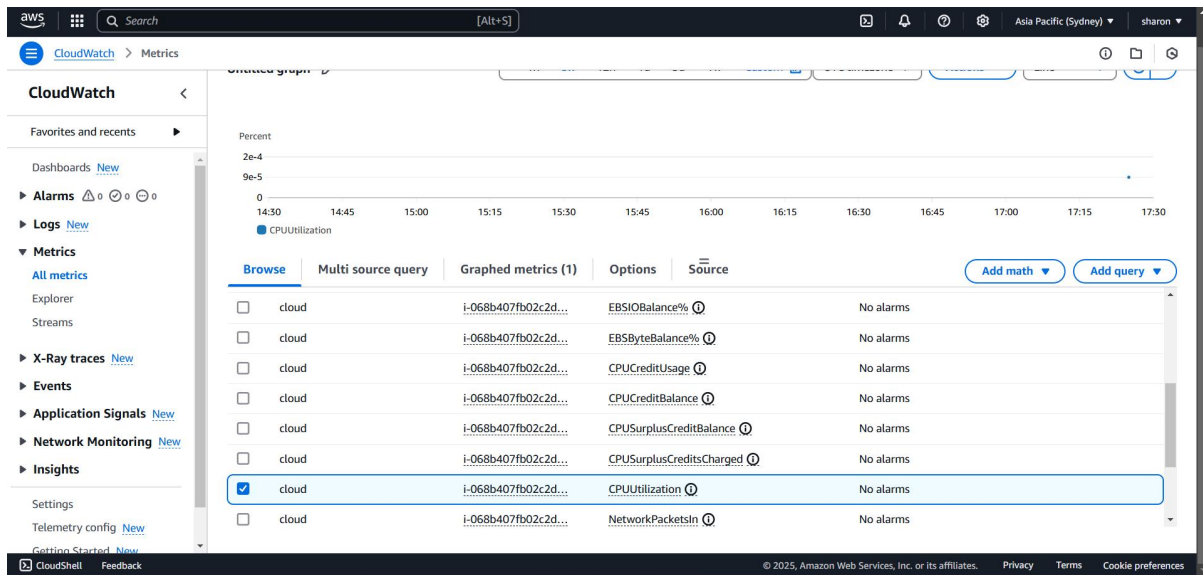

Step 5:

Copy the instance which is created and paste it on the pre -instance metrics and search it.

There the name of the instance will be shown.

Step 6: Select the factors which should be monitored. Here I have selected cpu utilization.

Step 7: The graph can be viewed.
